

Adaptive Learning and Job Creation in the Context of a Digital Revolution

A LiFT Workshop

Trondheim, Norway. September 30, October 1, 2016

Many people sense that a more robust and resilient community is needed in these times of transition, with disruptive changes across all sectors of society. Digital technologies are disrupting existing market structures and creating new ones at an amazing speed. How can we as individuals, organizations and local communities join forces to influence these deep structural changes and foster a common culture that benefits the society as a whole?

As part of our efforts to address these challenges, we are inviting you to participate in the upcoming workshop. The goal is to engage different stakeholders and resources to co-create prototypes of innovative learning concepts focusing on the following needs and opportunities:

- Self-organized and adaptive learning opportunities in schools. For instance through cooperation with businesses and social responsibility projects.
- Empowering people and fostering sustainable jobs for underutilized or marginalized segments of society. For instance through a combination of handcraft, technology and storytelling.
- Learning arenas for adults that feel the urge to move beyond personal success to build professional and trustworthy leadership capacity that benefits the society as a whole. For instance creating a “think & act tank” addressing specific needs and supporting social responsibility initiatives in the local community.

Please join us in creating and sustaining a compelling vision for our children’s future.

U:turn

Local host [U:turn](#) is a not-for-profit organization with a mission to create learning arenas and enterprises at the intersection of technology, education and compassion. The LiFT / U:turn workshop in Trondheim will bring together stakeholders with diverse interests and views in relation to this topic. Engaging these perspectives is essential in order to support the emergence of innovative solutions that can cut across sectors of society.
